

ADVISORY: 4132	DATABASE ADMINISTRATION	DATE: 11/10/87
----------------	-------------------------	----------------

TITLE: Availability of Dictionary Module Editor

Purpose

To announce the availability of Dictionary Module Editor (DME).

Scope and Applicability

Applicable to all 'Application Development System/Online' users.

General Information

DME is an easy_to_use module editor which can be used to edit source modules and ADS/OnLine processes.

Use of DME

DME is initiated at 'ENTER NEXT TASK CODE' (DBDC) by entering 'DME'. On the specification screen enter the name of the module and the version number. If the version number field is blank, the highest numbered version of the specified module is used. The user_id and password are used for security checks for modules that have definition or update responsibilities. One can use most of the SPF edit commands (both primary and line commands) to edit the source modules in DME.

DME can also be invoked from ONLINE TEST. The line of the module in error will be displayed along with the error message from ONLINE TEST. DME can be used to modify the module and set breakpoints.

The editor does not allow more than one user to edit a given module at the same time.

Documenttation

The following manuals, are available in the Data Base section.

Developer tool kit DICTIONARY MODULE EDITOR, DBMS, Inc.
